

Three-Season Home Service Plan

Year-round protection! If a concern arises between regular services, we will return at no extra charge!

Spring

- Inspect for and remove all webs, bee/wasps nests and any other evidence of pest activity from the previous year on the exterior and garage areas of your home.
- Look for possible mouse entry points around the home's perimeter and plug those entrances with copper mesh.
- Treat the exterior perimeter to control ants and other insect pests.
- Inspect the interior of the home and treat in areas of concern or infestation.
- Place rodent control devices in areas of concern.

Summer

- Inspect the exterior for and remove all webs, bee/wasps nests and any other evidence of pest activity.
- Look for any changes in the structure that could allow mice or insects to enter.
- Retreat the exterior perimeter to control carpenter ants and other insect pests.
- Inspect trees, stumps, etc. in yard for signs of carpenter ant activity.

Fall

- Exterior treatment to prevent over-wintering of pests like Asian Lady Beetles and Boxelder Bugs.
- Look for any changes in the structure that could allow mice or insects to enter.
- Inspect the interior for signs of infestation, and treat where necessary.
- Check rodent control devices for signs of activity.
